Bachelor in **Environmental Studies** (180 ECTC, 3 academic years)

**Professional profile**

This study program aims to provide basic general knowledge on environmental issues and phenomena on a global scale, while making interpretations in the Albanian context at the same time. Environment and its problems are in the spotlight on a local and global scale. In order to ensure balances for the proper functioning of the entire environmental system, its problems need to be addressed from experts of all levels, who use environmental logic in all human interventions based on the fact that sensitivity to environmental problems is still in very low levels in Albania.

**Major issues covered in this study program:**

- **General formation**
  Topography; Environmental Education; Environmental Law and Legislation; Urban Geography; etc.

- **Basic characteristic formation**
  Earth Science; Water, Aquatic Environment and Hidrology; Air, Atmosphere and Climatology; Environment Impact Assessment; Ecology; Environmental Management; Urban Environmental Planning; Toxicology and Pollution, etc.

- **Integrative formation**
  Mathematics; Computer Applications in Environment and GIS; Hydraulics; Chemistry; etc.

**Employment Opportunities**

The main employment sectors include:

- The private sector of consulting and design companies or studios in the field of environment, to provide assistance.

- The public sector: governance at local level, starting from municipalities and communes to districts or regions. Governance at central level;

- Domestic and foreign scientific research institutions, the main focus of which is the environment.
